

WG 3202- Unit 6 Review

Terms to know...

population density	Sparsely populated	Densely populated	Absolute Growth Rate	Annual Growth Rate	Natural change	Rate of Natural Increase
Dependency ratio	Migration	Immigration	Emigration	Net migration	Internal migration	Actual change
Push factors/forces	Pull factors/forces	Intervening obstacles	Census			

- Human (political, social, economic) and natural/physical (relief/shape, resources, climate) factors that affect population density
- Location of most major cities on Earth....why there?
- Fast growing, moderately growing, slow growing populations...what are the percentage differences?
- What is the growth rate like in most developed countries?
- Demographic Transition Model
- Reasons for population control in developed nations
- Natural increase or decrease...what are the factors involved?
- Formulae for birth rate and death rate
- RNI...formula
- Population pyramids
 - How are they designed?
 - 3 main types: Expansive/expanding, stationary/stable, contractive/contracting
 - Overall shape of each
 - What the shape indicates in terms of birth/death rates
 - What could cause the birth/death rates to be the way they are
- What does an asymmetrical age group on a pyramid indicate?
- What do convex/concave sides on a pyramid indicate?
- What do bumps in a pyramid indicate?
- Formula for dependency ratio
- Formula for actual change
